

CHRYSO® OptiCo2-HC

Compaction agent

DESCRIPTION

CHRYSO® OptiCo2-HC is an innovative formula that benefits the acceleration and curing of concrete with lower tile content. CHRYSO® OptiCo2-HC has a low content of alkalis and is free from chlorides.

CHRYSO® OptiCo2-HC makes dryconcrete better to compact and thus increase the compaction capacity of the concrete. The concrete gets a denser structure and thus also reduces the capillary absorption.

CHRYSO® OptiCo2-HC makes it possible to improve productivity by increasing rotations on molds and moulds.

FIELDS OF APPLICATION

- Blocks
- Hollow-core slabs
- Pipes
- Drycast concrete, coloured or not

INDICATIVE INFORMATION

NORMATIVE AND REGULATORY INFORMATION

- This product conforms to CE marking. The appropriate declaration can be found on our internet site.

METHOD OF USE

- This product is completely miscible in water.
- This product must be added to the mixer with the mixing water.
- The optimum dosage of this product can only be established after trial tests, taking into account the local conditions.
- This product is compatible with any CHRYSO® admixture.

This product is compatible with other products from CHRYSO®- range.

Dosage:

Dosage: 0.4 to 4.0 kg per 100 kg cement.

A dosage of 0.8-1.3% of the cement weight is commonly used.

PRECAUTIONS

- Protect from frost.
- Avoid prolonged exposure to high temperatures.

SAFETY

Prior to any use, please read carefully the Material Safety Data Sheets.
